1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

1.1 Material Identity / Product identifier: Expandable Polystyrene
Chemical name: Expandable Polystyrene (containing pentane expanding agent).
Synonyms: FR-ESP, flame Retardant Expandable polystyrene, poly(phenylethene).
Structural Formula: \((\text{C}_8\text{H}_8)_x; (\text{-CH}-(\text{C}_6\text{H}_5))_x\text{-CH}_2-x\)
CAS Registry Number: 9003-53-6
Chemical Name and/or Family or Description: Chemical Family: Polymer.

1.2 Relevant identified uses of the substance or mixture:
Used primarily for the manufacture of foamed thermal insulation and packaging

1.3 Company Information
Company name: Novidesa S.A. de C.V.
Company address: Km. 154 Carretera México-Veracruz (Via Texcoco), (KM. 8 Carretera Apizaco-Veracruz) Corredor Industrial San Cosme Xalostoc, Tlaxcala 90460

Telephone Numbers
Transportation Emergency
Company: + (52) (241) 413-0000
SETIQ (México): 01-800-00-214-00
CHEMTREC (USA): 800-424-930
CANUTEC (Canada): (613) 996-66660
Medical Emergency: + (52) (241) 413-0000
General MSDS Assistance: + (52) (241) 413-0000
Technical Information: + (52) (241) 413-0000

2. HAZARD IDENTIFICATION

2.1 Classification of the substance or mixture
In use, may form flammable/explosive vapour-air mixture.

2.1.2 Regulation (EC) No. 1272/2008 (CLP)
In use may form flammable/explosive vapour-air mixture.

2.2 Label elements
2.2.1 Label elements
Hazard Symbol: None.
Risk Phrases: S3/7: Keep container tightly closed in a cool place.
S9: Keep container in a well-ventilated place.
S16: Keep away from sources of ignition - No smoking.
S33: Take precautionary measures against static discharges.
Safety Phrases: P210: Keep away from heat, sparks, open flame, hot surfaces - No smoking.
P233: Keep container tightly closed.
P243: Take precautionary measures against static discharge.
P403 + P235: Store in a well-ventilated place. Keep cool.

2.2.2 Label elements
According to Regulation (EC) No. 1272/2008 (CLP)
Hazard Pictogram: None.
Signal word(s): None.
Hazard statement(s): EUH018: In use may form flammable/explosive vapour-air mixture.

Precautionary statement(s): P210: Keep away from heat, sparks, open flame, hot surfaces - No smoking.
P233: Keep container tightly closed.
P243: Take precautionary measures against static discharge.
P403 + P235: Store in a well-ventilated place. Keep cool.

2.3 Other hazards:
Product releases pentane, a flammable hydrocarbon.
May cause irritation to skin and eyes.
3. COMPOSITION AND INFORMATION ON INGREDIENTS

Polystyrene (CAS No. 9003-53-6), containing pentane isomers as blowing agent.

3.1 Substances:
Polymer

4. FIRST AID MEASURES

4.1 General
Pentane used to expand the pearl is the main risk in the management of EPS.

Inhalation
If inhaled, remove to fresh air. If not breathing, clear person's airway and give artificial respiration. If breathing is difficult, qualified medical personnel may administer oxygen. Get medical attention immediately.

Ingestion
If more than several mouthfuls of this material are swallowed, give two glasses of water (16 oz.). Get medical attention.

Skin
Wash skin with plenty of soap and water for several minutes. Get medical attention if skin irritation develops or persists.

Eye
Flush eyes with plenty of water for several minutes. Remove larger particulates from the eye as one would any foreign object. Get medical attention if eye irritation persists or particulates are difficult to remove from the eye.

4.2 POTENTIAL HEALTH EFFECTS

Primary Route of Exposure
Eye___X__ Skin___X__ Inhalation___X__ Ingestion____

Effects of Overexposure

Ingestion
Dust may cause irritation of the nose and throat. Overexposure to high concentrations of dust may cause respiratory irritation, experienced as coughing and difficulty breathing. If more than several mouthfuls are swallowed, abdominal discomfort, nausea, and diarrhea may occur.

Inhalation
Vapors or mist may cause irritation of the nose and throat. Inhalation may cause dizziness, drowsiness, euphoria, loss of coordination, disorientation, headache, nausea, and vomiting. In poorly ventilated areas or confined spaces, unconsciousness and asphyxiation may result. Prolonged or repeated overexposure may result in the absorption of potentially harmful amounts of material.

Eye contact
Vapor may cause irritation, experienced as discomfort, with excess tear production and blinking, and seen as excess redness of the eye. Product may contain residual amounts of dust or small particulates which may cause eye irritation or abrasion experienced as mild discomfort and slight excess redness of the eye.

Skin contact
Product may contain residual amounts of dust or small particulates that may cause skin irritation or abrasion experienced as local redness with possible mild discomfort.

Sensitization Properties:
Unknown

Chronic:
Prolonged or repeated inhalation of dust or particulates may impair lung function or cause lung damage.

4.3 Medical attention
Overexposure to vapor, dust or mist may aggravate existing respiratory conditions, such as asthma, bronchitis, and inflammatory or fibrotic respiratory disease.
5. FIRE -FIGHTING MEASURES

Ignition Temperature - AIT (degrees C):
260 (500 F) for Pentane
471 (880 F) by ASTM D-1929 Expanded polystyrene

Flash Point (degrees C)
-40 (-40 F) CC for Pentane

Flammable Limits % (Lower-Upper):
Lower: 1.5 for Pentane
Upper: 7.8 for Pentane

5.1 Recommended Fire Extinguishing Agents And Special Procedures:
Water may be ineffective on flames but should be used to cool fire-exposed containers and provide protection for persons attempting to stop the leak. Use water spray, dry chemical, foam or carbon dioxide to extinguish flames.

5.2 Unsuitable extinguish media
Do not use water jet.

5.3 Unusual or Explosive Hazards:
Danger! Extremely flammable materials may release vapors that travel long distances, ignite, and flash back. Containers may explode in a fire. Do not expose to heat, sparks, flame, static, or other sources of ignition. When handling, use non-sparking tool, ground and bond all containers. Explosive air-vapor mixtures may form. Fire gives off dense black smoke and acid gasses. Electrostatic discharge can be a source of ignition due to accumulated pentane vapors exceeding the L.E.L. (lower explosive limit) of 1.5% (15,000 ppm). Pentane vapors may be emitted from newly opened containers or when the product is heated. If ignited, there could be a very high rate of flame propagation

Combustion decomposition products
Can produce carbon monoxide, carbon dioxide, styrene, aliphatic hydrocarbons

5.4 Advice for firefighters
Fire fighters should wear complete protective clothing including self-contained breathing apparatus. Chemical protection suit. Keep containers cool by spraying with water if exposed to fire. Flammable concentrations of pentane may accumulate on storage in closed containers

Personal protective equipment
Wear full protective clothing (chemical splash suit) and positive pressure self-contained breathing apparatus.

NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) HAZARD IDENTIFICATION
NFPA -Health: 1 – Slightly dangerous. Irritation or possible reversible damage within 7 days.
NFPA -Flammability: 3 – Liquid or solid can burn under almost all ambient temperature conditions.
NFPA -Instability: 0 - Normally stable, even under fire conditions, and not reactive with water.

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions
Caution - spillages may be slippery. The remaining pentane in the EPS may form explosive mixtures with air. Pentane vapor is heavier than air, watch out for pits and confined spaces. Away or avoid the danger of any cause of fire. Avoid friction, sparks and other means of ignition. Avoid static discharges. Use only non-sparking tools.

6.2 Environmental precautions
Prevent entry into sewers or drains

6.3 Methods and material for containment and cleaning up
If safe to do the following:
Small spills: Sweep up and shovel into waste drums or plastic bags. Transfer to a lidded container for disposal or recovery.
Large spills: If possible, use vacuum equipment suitable for hazardous environments for cleaning up spills. Transfer to a covered container for disposal or spilled material recuperación.

6.4 Reference to other sections
See section 8 to personal protective protection and section 13 to waste treatment methods

Remark: see section 8 to personal protective protection and section 13 to waste treatment methods
7. HANDLING AND STORAGE

7.1 Precautions for safe handling

Provide adequate ventilation including appropriate local extraction system. Do not breathe fumes / vapor. Avoid creating dust clouds. Should be kept away from open flames and other sources of ignition. Extinguish any other fire. Away or avoid the danger of any cause of fire. avoid friction, sparks and other means of ignition. The electrical system should not generate sparks. Do not smoke during use. Avoid static discharges. Make sure you are properly grounded. Avoid release to the environment. They must obtain permission from the appropriate local authority before discharge of waste material.

7.2 Process Hazards

Avoid static discharges. To avoid the formation of static electricity, and creating an explosive mixture of pentane / air, the containers should be emptied completely during processing. The line speed should not exceed 8 m / s during normal pumping operations. All parts of the plant and equipment must be interconnected among themselves and grounded. Ground rods should be checked periodically. Be used antistatic clothing and footwear.

7.3 Conditions for safe storage, including any incompatibilities

When stored in closed containers of flammable concentrations may pentane. Before unloading cargo containers, keep the doors open and let it ventilate for one hour. Keep container in a cool, well ventilated place and keep tightly closed. Keep away from direct sunlight and other sources of heat or ignition. Keep away from rain and wet conditions. Mass: Keep under inert gas. Open reservoirs must be covered with an open rigid grid. Avoid static discharges. The electrical system should not generate sparks. The product is usually octagonal barrels fiber. Do not stack containers. Storage Temperature: Ambient.

7.4 Specifically designed for local vessels storage

The storage rooms must be kept cool to reduce the release of pentane, and be provided with an adequate venting system to avoid accumulation of pentane. Furthermore, should applied safety devices to alert the formation of explosive mixtures of pentane / air. The electrical system should not generate sparks. The equipment to be installed in potentially explosive atmospheres must comply with the requirements of NOM-001-SEE-2005 Chapter 5 and ATEX Directive 94/9/EC.

7.5 Specific end use(s)

See section 1.2

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 Control Parameters.

8.1.1 Occupational Exposure Limits.

Limits expandable agent, during the conversion process (expansion) preparation releases pentane.

8.1.2 Biological limit value not established.

8.1.3 PNEC and DNEL not established.

8.2 Exposure controls

8.2.1 Appropriate engineering controls Use only in well ventilated.
8.2.2 Personal Protection Equipment

Eye protection / face

Safety glasses.

Skin protection (hand guard / Other)

Wear suitable gloves. Recommended: Impervious gloves (EN 374).
Penetration time of glove material: see the information provided by
the manufacturer of the gloves.
Wear suitable protective clothing.
Safety shoes or boots antistatic antistatic

Respiratory Protection

If dust is generated during handling, you must use an approved dust
mask.

Thermal hazards

Not applicable.

8.2.3 Environmental Exposure Controls

Local regulations on volatile organic compounds (VOCs) must be
complied with where applicable to the EPS industry.

11.2 Other information: None

12. ECOLOGICAL INFORMATION

This environmental hazard assessment is based on information available on similar products. This product contains a substance that is classified as hazardous to the environment. However, recent studies on aquatic organisms have shown that the beads of EPS (Expanded Polystyrene), not containing this substance need not be classified as hazardous to the environment

12.1 Toxicity

Aquatic invertebrates:
EC50 (48 h)> 100 mg / l, Daphnia magna (OECD Guidelines 202, part 1, static) Nominal concentration. The product has a low solubility in the test medium. An eluent has to be examined. No toxic effects within the range of solubility.

Aquatic plants:
EC50 (72 h)> 100 mg / l (growth rate), Scenedesmus subspicatus (OECD Guidelines 202, part 1, static) Nominal concentration. The product has a low solubility in the test medium. An eluent is to be examined. No toxic effects within the range of solubility.

12.2 Persistence and degradability

The product itself has not been tested. In accordance with the required stability of the product is not biodegradable. The statement has been obtained from the product structure. Can be largely eliminated from water by abiotic processes such as mechanical separation.

12.3 Bioaccumulative potential:
The product has a low potential for bioaccumulation.

12.4 Mobility in soil:
The product is essentially insoluble in water. The expandable polystyrene sinks in fresh water, can float or sink in seawater.

12.5 Results of PBT and vPvB:
Not classified as PBT or vPvB.

12.6 Other adverse effects:
Pentane has a Global Warming Potential (GWP) very low (<0.00044) and a zero Ozone Depletion Potential.
13. DISPOSAL CONSIDERATION

The beads old and unused surplus may contain residual pentane. Therefore, the product should be subject to all existing security measures for fresh material. See also Section 7.

13.1 Methods of waste treatment is possible recovery or recycling. Separate all containers for recovery or disposal.

13.2 Additional information: The normal route of elimination by incineration using a specialized contractor accredited. Dispose of contents in accordance with applicable local, state or national

14. TRANSPORT INFORMATION

14.1 US DOT Information
Shipping Name: Polymeric beads, expandable
